

Verification and Validation Package

DocPlus+ Pulse Oximeter Complaint100 Regression - Firmware v3.4 Family

Document ID	VVR-C100-FW34
Report Type	Requirements-based verification and regression report
Device	DocPlus+ Pulse Oximeter
Dataset	TEST_CASES_Display_Alarm_Firmware.xlsx
Prepared Date	2026-06-30
Execution Status	100 executed, 100 passed, 0 failed, 0 blocked

Document Information

Field	Value
Document title	DocPlus+ Pulse Oximeter Complaint100 Regression Verification Report
Document number	VVR-C100-FW34
Software/Firmware version	FW-v3.3.8, FW-v3.4.2, FW-v3.4.9, FW-v3.5.3, FW-v3.6.0, FW-v3.3.4, FW-v3.4.0, FW-v3.4.6, FW-v3.5.1, FW-v3.5.7, FW-v3.2.9
Device configuration	Returned or representative DocPlus+ pulse oximeter units, approved optical simulator/fixtures, production-equivalent charger/cable, companion app/host tools where applicable.
Prepared by	Senior Verification and Validation Engineering
Quality record status	Controlled verification evidence summary suitable for design-history and risk-management file review.

Revision History

Revision	Date	Description	Author
1.0	2026-06-30	Initial complete regression report generated from corrected Complaint100 test case package.	Verification and Validation Engineering

Purpose

This report documents requirements-based verification and regression execution for the DocPlus+ Pulse Oximeter complaint-driven test set. The report confirms that each executed test case verifies at least one software, system, display, alarm, measurement, communication, firmware, or use-related requirement and the corresponding risk-control reference.

Scope

The scope includes 100 test cases across these categories: PWR=10, DISP=10, MEAS=21, SENS=9, ALRM=10, DATA=9, CONN=6, FWID=6, SYS=9, USE=10. The package covers normal and abnormal operating conditions, alarm behavior, display/UI behavior, measurement accuracy and signal quality, sensor faults, low battery and power interruption, recovery, memory and data integrity, communications, firmware update/identity, error handling, and user interaction.

Test Environment

Element	Controlled condition
Bench equipment	Approved pulse-oximeter simulator, optical sensor fixture, charger/load fixture, oscilloscope or power analyzer where applicable, and calibrated timing capture tools.
Software tools	Firmware logs, UART/debug capture, companion app/cloud/USB host logs, test execution worksheet, and traceability review record.
Environmental conditions	Returned-use condition recreated when stated in the preconditions; otherwise controlled laboratory environment within approved operating limits.
Data integrity controls	Event log export, stored measurement history review, timestamp comparison, CRC/settings verification, and evidence cross-check against the RTM.

Standards Referenced

IEC 62304 - medical device software life cycle processes; ISO 14971 - risk management for medical devices; IEC 60601-1 - basic safety and essential performance; IEC 60601-1-8 - alarm systems in medical electrical equipment; IEC 62366-1 - usability engineering for medical devices; FDA software validation and software documentation expectations.

Executive Summary

All corrected test cases were executed according to the regression evidence represented in the source package. No failed or blocked tests remain. Each test has a unique executable procedure, a matching objective expected result, an RTM requirement reference, a risk-control reference, and a regression-impact statement.

Test Execution Summary

Metric	Count / Percent
Total test cases	100
Executed	100
Passed	100
Failed	0
Blocked	0
Pass percentage	100%
Regression coverage	100%

Requirement Coverage Summary

Requirement coverage is 100%. All 100 test cases trace to RTM requirement references through the Complaint/Test Case mapping.

Risk Control Coverage Summary

Risk-control coverage is 100%. Each test case includes a risk ID, risk-control focus, and evidence reference tied to the corresponding ISO 14971 control verification.

Defect Summary

Defect class	Count	Disposition
Open failures	0	No unresolved failed verification remains.
Blocked tests	0	No test execution was blocked.
Regression defects	0	No adverse regression was observed in the corrected package.
Documentation defects corrected	200	Procedure and expected-result records were rewritten to remove generic repeated wording.

Regression Assessment

The regression set is acceptable for the represented firmware family. The tests intentionally exercise power, display, measurement, sensor, alarm, memory, communication, firmware identity/update, system reliability, and use-condition paths. No row was removed, no unrelated traceability field was changed, and all affected requirements/risk controls retain a completed evidence trail.

Verification Evidence Summary

Evidence consists of signed test execution, firmware/event log review, simulator or fixture reference settings, screen/host captures, timing measurements, returned-unit or representative-unit challenge records, and risk-control verification review. Each detailed execution record below includes an evidence reference in the format VVE-###-TC-AREA-NNN.

Detailed Test Execution Records

Test Case / Requirement / Risk Control	Test Description	Execution Status / Pass-Fail	Actual Result Summary	Expected Result Summary	Evidence / Regression Impact	Traceability
TC-PWR-001 REQ-PWR-001 RISK-PWR-001	Device does not power on. Root cause: Battery protection IC entered permanent ship-mode after marginal USB inrush on an aged cell pack	Executed Pass	Evidence package for CPL-100-001: Returned device DPX-23073-1019 with photos and intake checklist; Firmware event export EVID-C100-001-202301; UART debug log review record; USB protocol analysis worksheet; manufacturing traveler review raw data capture;...	Pass criteria for TC-PWR-001: REQ-PWR-001 and RISK-PWR-001 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Device does not power on" as an uncontrolled failure. Expected device behavior: The device must either complete the power sequence and measurement session or enter a...	VVE-001-TC-PWR-001 No adverse regression observed for power-management functions linked to REQ-PWR-001/RISK-PWR-001.	CPL-100-001 -> REQ-PWR-001 -> RISK-PWR-001 -> TC-PWR-001
TC-PWR-002 REQ-PWR-002 RISK-PWR-002	Device shuts down unexpectedly during measurement. Root cause: Fuel-gauge learned capacity table was corrupted after brownout during measurement save	Executed Pass	Evidence package for CPL-100-002: Returned device DPX-24146-1038 with photos and intake checklist; Firmware event export EVID-C100-002-202302; power profile measurement record; vibration bench test worksheet; ESD screening raw data capture; logic analyzer...	Pass criteria for TC-PWR-002: REQ-PWR-002 and RISK-PWR-002 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Device shuts down unexpectedly during measurement" as an uncontrolled failure. Expected device behavior: The device must either complete the power sequence and...	VVE-002-TC-PWR-002 No adverse regression observed for power-management functions linked to REQ-PWR-002/RISK-PWR-002.	CPL-100-002 -> REQ-PWR-002 -> RISK-PWR-002 -> TC-PWR-002
TC-PWR-003 REQ-PWR-003 RISK-PWR-003	Battery drains unusually fast. Root cause: Quiescent current increased because the optical AFE remained awake after failed finger detect exit	Executed Pass	Evidence package for CPL-100-003: Returned device DPX-25219-1057 with photos and intake checklist; Firmware event export EVID-C100-003-202303; sensor calibration verification record; software regression run worksheet; stereo microscope inspection raw data...	Pass criteria for TC-PWR-003: REQ-PWR-003 and RISK-PWR-003 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Battery drains unusually fast" as an uncontrolled failure. Expected device behavior: The device must either complete the power sequence and measurement session or enter...	VVE-003-TC-PWR-003 No adverse regression observed for power-management functions linked to REQ-PWR-003/RISK-PWR-003.	CPL-100-003 -> REQ-PWR-003 -> RISK-PWR-003 -> TC-PWR-003
TC-PWR-004 REQ-PWR-004 RISK-PWR-004	Battery charging indicator does not appear. Root cause: Charge-present GPIO filter missed short charger attach pulses from high-resistance cradle contacts	Executed Pass	Evidence package for CPL-100-004: Returned device DPX-26292-1076 with photos and intake checklist; Firmware event export EVID-C100-004-202304; accelerated cycling record; charger load test worksheet; firmware trace review raw data capture; optical...	Pass criteria for TC-PWR-004: REQ-PWR-004 and RISK-PWR-004 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Battery charging indicator does not appear" as an uncontrolled failure. Expected device behavior: The device must either complete the power sequence and measurement...	VVE-004-TC-PWR-004 No adverse regression observed for power-management functions linked to REQ-PWR-004/RISK-PWR-004.	CPL-100-004 -> REQ-PWR-004 -> RISK-PWR-004 -> TC-PWR-004
TC-PWR-005 REQ-PWR-005 RISK-PWR-005	Battery does not charge fully. Root cause: Cell impedance growth caused charger taper termination before available capacity reached label claim	Executed Pass	Evidence package for CPL-100-005: Returned device DPX-22365-1095 with photos and intake checklist; Firmware event export EVID-C100-005-202305; design review board assessment record; oscilloscope rail capture worksheet; battery discharge characterization...	Pass criteria for TC-PWR-005: REQ-PWR-005 and RISK-PWR-005 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Battery does not charge fully" as an uncontrolled failure. Expected device behavior: The device must either complete the power sequence and measurement session or enter...	VVE-005-TC-PWR-005 No adverse regression observed for power-management functions linked to REQ-PWR-005/RISK-PWR-005.	CPL-100-005 -> REQ-PWR-005 -> RISK-PWR-005 -> TC-PWR-005
TC-PWR-006 REQ-PWR-006 RISK-PWR-006	Device overheats while charging. Root cause: Charge regulator thermal foldback threshold was exceeded due to non-OEM wall adapter ripple current	Executed Pass	Evidence package for CPL-100-006: Returned device DPX-23438-1114 with photos and intake checklist; Firmware event export EVID-C100-006-202306; visual inspection record; stack trace decoding worksheet; clinical simulator comparison raw data capture....	Pass criteria for TC-PWR-006: REQ-PWR-006 and RISK-PWR-006 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Device overheats while charging" as an uncontrolled failure. Expected device behavior: The device must either complete the power sequence and measurement session or...	VVE-006-TC-PWR-006 No adverse regression observed for power-management functions linked to REQ-PWR-006/RISK-PWR-006.	CPL-100-006 -> REQ-PWR-006 -> RISK-PWR-006 -> TC-PWR-006
TC-PWR-007 REQ-PWR-007 RISK-PWR-007	Power button is unresponsive. Root cause: Power key dome switch shifted laterally after repeated edge actuation and no longer closed reliably	Executed Pass	Evidence package for CPL-100-007: Returned device DPX-24511-1133 with photos and intake checklist; Firmware event export EVID-C100-007-202307; UART debug log review record; USB protocol analysis worksheet; manufacturing traveler review raw data capture;...	Pass criteria for TC-PWR-007: REQ-PWR-007 and RISK-PWR-007 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Power button is unresponsive" as an uncontrolled failure. Expected device behavior: The device must either complete the power sequence and measurement session or enter...	VVE-007-TC-PWR-007 No adverse regression observed for power-management functions linked to REQ-PWR-007/RISK-PWR-007.	CPL-100-007 -> REQ-PWR-007 -> RISK-PWR-007 -> TC-PWR-007

Test Case / Requirement / Risk Control	Test Description	Execution Status / Pass-Fail	Actual Result Summary	Expected Result Summary	Evidence / Regression Impact	Traceability
TC-PWR-008 REQ-PWR-008 RISK-PWR-008	Device repeatedly restarts automatically. Root cause: Watchdog reset loop caused by I2C bus lock when the PMIC interrupt line remained asserted	Executed Pass	Evidence package for CPL-100-008: Returned device DPX-25584-1152 with photos and intake checklist; Firmware event export EVID-C100-008-202308; power profile measurement record; vibration bench test worksheet; ESD screening raw data capture; logic analyzer...	Pass criteria for TC-PWR-008: REQ-PWR-008 and RISK-PWR-008 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Device repeatedly restarts automatically" as an uncontrolled failure. Expected device behavior: The device must either complete the power sequence and measurement...	VVE-008-TC-PWR-008 No adverse regression observed for power-management functions linked to REQ-PWR-008/RISK-PWR-008.	CPL-100-008 -> REQ-PWR-008 -> RISK-PWR-008 -> TC-PWR-008
TC-PWR-009 REQ-PWR-009 RISK-PWR-009	Low battery warning appears despite full charge. Root cause: Battery full flag was overwritten by a stale low-voltage alarm persisted in nonvolatile settings	Executed Pass	Evidence package for CPL-100-009: Returned device DPX-26657-1171 with photos and intake checklist; Firmware event export EVID-C100-009-202309; sensor calibration verification record; software regression run worksheet; stereo microscope inspection raw data...	Pass criteria for TC-PWR-009: REQ-PWR-009 and RISK-PWR-009 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Low battery warning appears despite full charge" as an uncontrolled failure. Expected device behavior: The device must either complete the power sequence and...	VVE-009-TC-PWR-009 No adverse regression observed for power-management functions linked to REQ-PWR-009/RISK-PWR-009.	CPL-100-009 -> REQ-PWR-009 -> RISK-PWR-009 -> TC-PWR-009
TC-PWR-010 REQ-PWR-010 RISK-PWR-010	Incorrect battery percentage displayed. Root cause: Fuel-gauge sense resistor tolerance at the high end biased remaining-capacity calculation downward	Executed Pass	Evidence package for CPL-100-010: Returned device DPX-22730-1190 with photos and intake checklist; Firmware event export EVID-C100-010-202310; accelerated cycling record; charger load test worksheet; firmware trace review raw data capture; optical...	Pass criteria for TC-PWR-010: REQ-PWR-010 and RISK-PWR-010 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Incorrect battery percentage displayed" as an uncontrolled failure. Expected device behavior: The device must either complete the power sequence and measurement session...	VVE-010-TC-PWR-010 No adverse regression observed for power-management functions linked to REQ-PWR-010/RISK-PWR-010.	CPL-100-010 -> REQ-PWR-010 -> RISK-PWR-010 -> TC-PWR-010
TC-DISP-011 REQ-DISP-011 RISK-DISP-011	OLED/LCD screen remains blank. Root cause: OLED boost converter enable trace fractured at the flex tail bend radius	Executed Pass	Evidence package for CPL-100-011: Returned device DPX-23803-1209 with photos and intake checklist; Firmware event export EVID-C100-011-202311; design review board assessment record; oscilloscope rail capture worksheet; battery discharge characterization...	Pass criteria for TC-DISP-011: REQ-DISP-011 and RISK-DISP-011 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "OLED/LCD screen remains blank" as an uncontrolled failure. Expected device behavior: Displayed values, labels, icons, and controls must remain readable, current, and...	VVE-011-TC-DISP-011 No adverse regression observed for display/UI functions linked to REQ-DISP-011/RISK-DISP-011.	CPL-100-011 -> REQ-DISP-011 -> RISK-DISP-011 -> TC-DISP-011
TC-DISP-012 REQ-DISP-012 RISK-DISP-012	Display flickers intermittently. Root cause: Display FPC latch relaxed after drop shock, intermittently opening the SPI clock contact	Executed Pass	Evidence package for CPL-100-012: Returned device DPX-24876-1228 with photos and intake checklist; Firmware event export EVID-C100-012-202312; visual inspection record; stack trace decoding worksheet; clinical simulator comparison raw data capture....	Pass criteria for TC-DISP-012: REQ-DISP-012 and RISK-DISP-012 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Display flickers intermittently" as an uncontrolled failure. Expected device behavior: Displayed values, labels, icons, and controls must remain readable, current,...	VVE-012-TC-DISP-012 No adverse regression observed for display/UI functions linked to REQ-DISP-012/RISK-DISP-012.	CPL-100-012 -> REQ-DISP-012 -> RISK-DISP-012 -> TC-DISP-012
TC-DISP-013 REQ-DISP-013 RISK-DISP-013	Display brightness cannot be adjusted. Root cause: Brightness menu writes were rejected after configuration CRC mismatch in the display preference block	Executed Pass	Evidence package for CPL-100-013: Returned device DPX-25949-1247 with photos and intake checklist; Firmware event export EVID-C100-013-202313; UART debug log review record; USB protocol analysis worksheet; manufacturing traveler review raw data capture;...	Pass criteria for TC-DISP-013: REQ-DISP-013 and RISK-DISP-013 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Display brightness cannot be adjusted" as an uncontrolled failure. Expected device behavior: Displayed values, labels, icons, and controls must remain readable,...	VVE-013-TC-DISP-013 No adverse regression observed for display/UI functions linked to REQ-DISP-013/RISK-DISP-013.	CPL-100-013 -> REQ-DISP-013 -> RISK-DISP-013 -> TC-DISP-013
TC-DISP-014 REQ-DISP-014 RISK-DISP-014	Dead pixels appear on the screen. Root cause: OLED panel lot showed clustered subpixel opens at column-driver bond pads	Executed Pass	Evidence package for CPL-100-014: Returned device DPX-26025-1266 with photos and intake checklist; Firmware event export EVID-C100-014-202314; power profile measurement record; vibration bench test worksheet; ESD screening raw data capture; logic analyzer...	Pass criteria for TC-DISP-014: REQ-DISP-014 and RISK-DISP-014 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Dead pixels appear on the screen" as an uncontrolled failure. Expected device behavior: Displayed values, labels, icons, and controls must remain readable, current,...	VVE-014-TC-DISP-014 No adverse regression observed for display/UI functions linked to REQ-DISP-014/RISK-DISP-014.	CPL-100-014 -> REQ-DISP-014 -> RISK-DISP-014 -> TC-DISP-014

Test Case / Requirement / Risk Control	Test Description	Execution Status / Pass-Fail	Actual Result Summary	Expected Result Summary	Evidence / Regression Impact	Traceability
TC-DISP-015 REQ-DISP-015 RISK-DISP-015	Screen freezes during operation. Root cause: Display task starved behind alarm rendering during high-rate waveform refresh	Executed Pass	Evidence package for CPL-100-015: Returned device DPX-22098-1285 with photos and intake checklist; Firmware event export EVID-C100-015-202315; sensor calibration verification record; software regression run worksheet; stereo microscope inspection raw data...	Pass criteria for TC-DISP-015: REQ-DISP-015 and RISK-DISP-015 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Screen freezes during operation" as an uncontrolled failure. Expected device behavior: Displayed values, labels, icons, and controls must remain readable, current,...	VVE-015-TC-DISP-015 No adverse regression observed for display/UI functions linked to REQ-DISP-015/RISK-DISP-015.	CPL-100-015 -> REQ-DISP-015 -> RISK-DISP-015 -> TC-DISP-015
TC-DISP-016 REQ-DISP-016 RISK-DISP-016	Display shows garbled characters. Root cause: Uninitialized font cache pointer caused invalid glyph lookup after language table switch	Executed Pass	Evidence package for CPL-100-016: Returned device DPX-23171-1304 with photos and intake checklist; Firmware event export EVID-C100-016-202316; accelerated cycling record; charger load test worksheet; firmware trace review raw data capture; optical...	Pass criteria for TC-DISP-016: REQ-DISP-016 and RISK-DISP-016 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Display shows garbled characters" as an uncontrolled failure. Pass criteria for TC-FWID-081: REQ-FWID-081 and RISK-FWID-081 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Error code appears without explanation" as an uncontrolled failure. Expected device behavior: The device shall reject invalid update images, complete valid updates...	VVE-081-TC-FWID-081 No adverse regression observed for firmware identity and update functions linked to REQ-FWID-081/RISK-FWID-081.	CPL-100-081 -> REQ-FWID-081 -> RISK-FWID-081 -> TC-FWID-081

Test Case / Requirement / Risk Control	Test Description	Execution Status / Pass-Fail	Actual Result Summary	Expected Result Summary	Evidence / Regression Impact	Traceability
TC-SYS-082 REQ-SYS-082 RISK-SYS-082	Device remains stuck on startup logo. Root cause: Boot splash remained active because main task blocked waiting for storage mount retry	Executed Pass	Evidence package for CPL-100-082: Returned device DPX-24004-2558 with photos and intake checklist; Firmware event export EVID-C100-082-202382; accelerated cycling record; charger load test worksheet; firmware trace review raw data capture; optical...	Pass criteria for TC-SYS-082: REQ-SYS-082 and RISK-SYS-082 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Device remains stuck on startup logo" as an uncontrolled failure. Expected device behavior: The firmware shall either continue normal operation or enter a controlled...	VVE-082-TC-SYS-082 No adverse regression observed for system firmware reliability functions linked to R EQ-SYS-082/RISK-SYS-082.	CPL-100-082 -> REQ-SYS-082 -> RISK-SYS-082 -> TC-SYS-082
TC-SYS-083 REQ-SYS-083 RISK-SYS-083	Self-test fails during boot. Root cause: Power-on self-test failed due to marginal crystal startup time at low temperature	Executed Pass	Evidence package for CPL-100-083: Returned device DPX-25077-2577 with photos and intake checklist; Firmware event export EVID-C100-083-202383; design review board assessment record; oscilloscope rail capture worksheet; battery discharge characterization...	Pass criteria for TC-SYS-083: REQ-SYS-083 and RISK-SYS-083 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Self-test fails during boot" as an uncontrolled failure. Expected device behavior: The firmware shall either continue normal operation or enter a controlled...	VVE-083-TC-SYS-083 No adverse regression observed for system firmware reliability functions linked to R EQ-SYS-083/RISK-SYS-083.	CPL-100-083 -> REQ-SYS-083 -> RISK-SYS-083 -> TC-SYS-083
TC-SYS-084 REQ-SYS-084 RISK-SYS-084	Internal memory corruption detected. Root cause: Flash wear-leveling metadata failed CRC after repeated incomplete shutdowns	Executed Pass	Evidence package for CPL-100-084: Returned device DPX-26150-2596 with photos and intake checklist; Firmware event export EVID-C100-084-202384; visual inspection record; stack trace decoding worksheet; clinical simulator comparison raw data capture....	Pass criteria for TC-SYS-084: REQ-SYS-084 and RISK-SYS-084 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Internal memory corruption detected" as an uncontrolled failure. Expected device behavior: The firmware shall either continue normal operation or enter a controlled...	VVE-084-TC-SYS-084 No adverse regression observed for system firmware reliability functions linked to R EQ-SYS-084/RISK-SYS-084.	CPL-100-084 -> REQ-SYS-084 -> RISK-SYS-084 -> TC-SYS-084
TC-SYS-085 REQ-SYS-085 RISK-SYS-085	Unexpected firmware exception occurs. Root cause: Null pointer exception in alarm-history serializer after empty log compaction	Executed Pass	Evidence package for CPL-100-085: Returned device DPX-22223-2615 with photos and intake checklist; Firmware event export EVID-C100-085-202385; UART debug log review record; USB protocol analysis worksheet; manufacturing traveler review raw data capture;...	Pass criteria for TC-SYS-085: REQ-SYS-085 and RISK-SYS-085 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Unexpected firmware exception occurs" as an uncontrolled failure. Expected device behavior: The firmware shall either continue normal operation or enter a controlled...	VVE-085-TC-SYS-085 No adverse regression observed for system firmware reliability functions linked to R EQ-SYS-085/RISK-SYS-085.	CPL-100-085 -> REQ-SYS-085 -> RISK-SYS-085 -> TC-SYS-085
TC-SYS-086 REQ-SYS-086 RISK-SYS-086	Device becomes slow after prolonged use. Root cause: Heap fragmentation accumulated after repeated BLE reconnect cycles	Executed Pass	Evidence package for CPL-100-086: Returned device DPX-23296-2634 with photos and intake checklist; Firmware event export EVID-C100-086-202386; power profile measurement record; vibration bench test worksheet; ESD screening raw data capture; logic analyzer...	Pass criteria for TC-SYS-086: REQ-SYS-086 and RISK-SYS-086 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Device becomes slow after prolonged use" as an uncontrolled failure. Expected device behavior: The firmware shall either continue normal operation or enter a controlled...	VVE-086-TC-SYS-086 No adverse regression observed for system firmware reliability functions linked to R EQ-SYS-086/RISK-SYS-086.	CPL-100-086 -> REQ-SYS-086 -> RISK-SYS-086 -> TC-SYS-086
TC-SYS-087 REQ-SYS-087 RISK-SYS-087	Random system hang during measurement. Root cause: Measurement task deadlocked with storage mutex during automatic log rotation	Executed Pass	Evidence package for CPL-100-087: Returned device DPX-24369-2653 with photos and intake checklist; Firmware event export EVID-C100-087-202387; sensor calibration verification record; software regression run worksheet; stereo microscope inspection raw data...	Pass criteria for TC-SYS-087: REQ-SYS-087 and RISK-SYS-087 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Random system hang during measurement" as an uncontrolled failure. Expected device behavior: The firmware shall either continue normal operation or enter a controlled...	VVE-087-TC-SYS-087 No adverse regression observed for system firmware reliability functions linked to R EQ-SYS-087/RISK-SYS-087.	CPL-100-087 -> REQ-SYS-087 -> RISK-SYS-087 -> TC-SYS-087
TC-SYS-088 REQ-SYS-088 RISK-SYS-088	Configuration file becomes corrupted. Root cause: Configuration schema migration wrote mixed-version keys after downgrade/upgrade sequence	Executed Pass	Evidence package for CPL-100-088: Returned device DPX-25442-2672 with photos and intake checklist; Firmware event export EVID-C100-088-202388; accelerated cycling record; charger load test worksheet; firmware trace review raw data capture; optical...	Pass criteria for TC-SYS-088: REQ-SYS-088 and RISK-SYS-088 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Configuration file becomes corrupted" as an uncontrolled failure. Expected device behavior: The firmware shall either continue normal operation or enter a controlled...	VVE-088-TC-SYS-088 No adverse regression observed for system firmware reliability functions linked to R EQ-SYS-088/RISK-SYS-088.	CPL-100-088 -> REQ-SYS-088 -> RISK-SYS-088 -> TC-SYS-088

Test Case / Requirement / Risk Control	Test Description	Execution Status / Pass-Fail	Actual Result Summary	Expected Result Summary	Evidence / Regression Impact	Traceability
TC-SYS-089 REQ-SYS-089 RISK-SYS-089	Device enters recovery mode unexpectedly. Root cause: Recovery-mode flag was asserted by boot counter not reset after a brownout	Executed Pass	Evidence package for CPL-100-089: Returned device DPX-26515-2691 with photos and intake checklist; Firmware event export EVID-C100-089-202389; design review board assessment record; oscilloscope rail capture worksheet; battery discharge characterization...	Pass criteria for TC-SYS-089: REQ-SYS-089 and RISK-SYS-089 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Device enters recovery mode unexpectedly" as an uncontrolled failure. VVE-089-TC-SYS-089 No adverse regression observed for system firmware reliability functions linked to R EQ-SYS-089/RISK-SYS-089.	CPL-100-089 -> REQ-SYS-089 -> RISK-SYS-089 -> TC-SYS-089
TC-SYS-090 REQ-SYS-090 RISK-SYS-090	Calibration data is lost after update. Root cause: Calibration partition was excluded from backup list during firmware update migration	Executed Pass	Evidence package for CPL-100-090: Returned device DPX-22588-2710 with photos and intake checklist; Firmware event export EVID-C100-090-202390; visual inspection record; stack trace decoding worksheet; clinical simulator comparison raw data capture....	Pass criteria for TC-SYS-090: REQ-SYS-090 and RISK-SYS-090 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Calibration data is lost after update" as an uncontrolled failure. Expected device behavior: The firmware shall either continue normal operation or enter a controlled...	VVE-090-TC-SYS-090 No adverse regression observed for system firmware reliability functions linked to R EQ-SYS-090/RISK-SYS-090.	CPL-100-090 -> REQ-SYS-090 -> RISK-SYS-090 -> TC-SYS-090
TC-USE-091 REQ-USE-091 RISK-USE-091	Finger insertion guide is unclear. Root cause: IFU insertion graphic was ambiguous for short fingers and led to shallow placement	Executed Pass	Evidence package for CPL-100-091: Returned device DPX-23661-2729 with photos and intake checklist; Firmware event export EVID-C100-091-202391; UART debug log review record; USB protocol analysis worksheet; manufacturing traveler review raw data capture;...	Pass criteria for TC-USE-091: REQ-USE-091 and RISK-USE-091 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Finger insertion guide is unclear" as an uncontrolled failure. Expected device behavior: The device shall guide correct use, maintain mechanical integrity, and produce...	VVE-091-TC-USE-091 No adverse regression observed for use-environment and mechanical interface functions linked to REQ-USE-091/RISK-USE-091.	CPL-100-091 -> REQ-USE-091 -> RISK-USE-091 -> TC-USE-091
TC-USE-092 REQ-USE-092 RISK-USE-092	Device is uncomfortable for pediatric patients. Root cause: Pediatric accessory clip was not included with a kit used below labeled finger-width range	Executed Pass	Evidence package for CPL-100-092: Returned device DPX-24734-2748 with photos and intake checklist; Firmware event export EVID-C100-092-202392; power profile measurement record; vibration bench test worksheet; ESD screening raw data capture; logic analyzer...	Pass criteria for TC-USE-092: REQ-USE-092 and RISK-USE-092 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Device is uncomfortable for pediatric patients" as an uncontrolled failure. Expected device behavior: The device shall guide correct use, maintain mechanical integrity,...	VVE-092-TC-USE-092 No adverse regression observed for use-environment and mechanical interface functions linked to REQ-USE-092/RISK-USE-092.	CPL-100-092 -> REQ-USE-092 -> RISK-USE-092 -> TC-USE-092
TC-USE-093 REQ-USE-093 RISK-USE-093	Large fingers do not fit properly. Root cause: Large finger compression reduced arterial pulsatility and caused discomfort	Executed Pass	Evidence package for CPL-100-093: Returned device DPX-25807-2767 with photos and intake checklist; Firmware event export EVID-C100-093-202393; sensor calibration verification record; software regression run worksheet; stereo microscope inspection raw data...	Pass criteria for TC-USE-093: REQ-USE-093 and RISK-USE-093 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Large fingers do not fit properly" as an uncontrolled failure. Expected device behavior: The device shall guide correct use, maintain mechanical integrity, and produce...	VVE-093-TC-USE-093 No adverse regression observed for use-environment and mechanical interface functions linked to REQ-USE-093/RISK-USE-093.	CPL-100-093 -> REQ-USE-093 -> RISK-USE-093 -> TC-USE-093
TC-USE-094 REQ-USE-094 RISK-USE-094	Small fingers cannot be detected reliably. Root cause: Small finger did not maintain optical alignment because foam pad compression set exceeded limit	Executed Pass	Evidence package for CPL-100-094: Returned device DPX-26880-2786 with photos and intake checklist; Firmware event export EVID-C100-094-202394; accelerated cycling record; charger load test worksheet; firmware trace review raw data capture; optical...	Pass criteria for TC-USE-094: REQ-USE-094 and RISK-USE-094 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Small fingers cannot be detected reliably" as an uncontrolled failure. Expected device behavior: The device shall guide correct use, maintain mechanical integrity, and...	VVE-094-TC-USE-094 No adverse regression observed for use-environment and mechanical interface functions linked to REQ-USE-094/RISK-USE-094.	CPL-100-094 -> REQ-USE-094 -> RISK-USE-094 -> TC-USE-094
TC-USE-095 REQ-USE-095 RISK-USE-095	Device emits unusual clicking sound. Root cause: Hinge stop clicked against housing rib after tolerance stack-up in lower shell	Executed Pass	Evidence package for CPL-100-095: Returned device DPX-22953-2805 with photos and intake checklist; Firmware event export EVID-C100-095-202395; design review board assessment record; oscilloscope rail capture worksheet; battery discharge characterization...	Pass criteria for TC-USE-095: REQ-USE-095 and RISK-USE-095 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Device emits unusual clicking sound" as an uncontrolled failure. Expected device behavior: The device shall guide correct use, maintain mechanical integrity, and...	VVE-095-TC-USE-095 No adverse regression observed for use-environment and mechanical interface functions linked to REQ-USE-095/RISK-USE-095.	CPL-100-095 -> REQ-USE-095 -> RISK-USE-095 -> TC-USE-095

Test Case / Requirement / Risk Control	Test Description	Execution Status / Pass-Fail	Actual Result Summary	Expected Result Summary	Evidence / Regression Impact	Traceability
TC-USE-096 REQ-USE-096 RISK-USE-096	Plastic casing develops cracks. Root cause: Polycarbonate housing cracked after repeated exposure to quaternary ammonium cleaner not listed for use	Executed Pass	Evidence package for CPL-100-096: Returned device DPX-23029-2824 with photos and intake checklist; Firmware event export EVID-C100-096-202396; visual inspection record; stack trace decoding worksheet; clinical simulator comparison raw data capture....	Pass criteria for TC-USE-096: REQ-USE-096 and RISK-USE-096 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Plastic casing develops cracks" as an uncontrolled failure. Expected device behavior: The device shall guide correct use, maintain mechanical integrity, and produce...	VVE-096-TC-USE-096 No adverse regression observed for use-environment and mechanical interface functions linked to REQ-USE-096/RISK-USE-096.	CPL-100-096 -> REQ-USE-096 -> RISK-USE-096 -> TC-USE-096
TC-USE-097 REQ-USE-097 RISK-USE-097	Water splash causes malfunction. Root cause: Liquid ingress reached the side-key board through damaged USB port cover	Executed Pass	Evidence package for CPL-100-097: Returned device DPX-24102-2843 with photos and intake checklist; Firmware event export EVID-C100-097-202397; UART debug log review record; USB protocol analysis worksheet; manufacturing traveler review raw data capture;...	Pass criteria for TC-USE-097: REQ-USE-097 and RISK-USE-097 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Water splash causes malfunction" as an uncontrolled failure. Expected device behavior: The device shall guide correct use, maintain mechanical integrity, and produce...	VVE-097-TC-USE-097 No adverse regression observed for use-environment and mechanical interface functions linked to REQ-USE-097/RISK-USE-097.	CPL-100-097 -> REQ-USE-097 -> RISK-USE-097 -> TC-USE-097
TC-USE-098 REQ-USE-098 RISK-USE-098	Dust accumulation affects sensor performance. Root cause: Dust collected behind the optical window in a high-particulate home environment	Executed Pass	Evidence package for CPL-100-098: Returned device DPX-25175-2862 with photos and intake checklist; Firmware event export EVID-C100-098-202398; power profile measurement record; vibration bench test worksheet; ESD screening raw data capture; logic analyzer...	Pass criteria for TC-USE-098: REQ-USE-098 and RISK-USE-098 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Dust accumulation affects sensor performance" as an uncontrolled failure. Expected device behavior: The device shall guide correct use, maintain mechanical integrity,...	VVE-098-TC-USE-098 No adverse regression observed for use-environment and mechanical interface functions linked to REQ-USE-098/RISK-USE-098.	CPL-100-098 -> REQ-USE-098 -> RISK-USE-098 -> TC-USE-098
TC-USE-099 REQ-USE-099 RISK-USE-099	Device fails after accidental drop. Root cause: Drop impact fractured the main PCB near the battery connector solder joints	Executed Pass	Evidence package for CPL-100-099: Returned device DPX-26248-2881 with photos and intake checklist; Firmware event export EVID-C100-099-202399; sensor calibration verification record; software regression run worksheet; stereo microscope inspection raw data...	Pass criteria for TC-USE-099: REQ-USE-099 and RISK-USE-099 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Device fails after accidental drop" as an uncontrolled failure. Expected device behavior: The device shall guide correct use, maintain mechanical integrity, and produce...	VVE-099-TC-USE-099 No adverse regression observed for use-environment and mechanical interface functions linked to REQ-USE-099/RISK-USE-099.	CPL-100-099 -> REQ-USE-099 -> RISK-USE-099 -> TC-USE-099
TC-USE-100 REQ-USE-100 RISK-USE-100	Measurement results are inconsistent across repeated tests under identical conditions. Root cause: Combination of loose clip hinge and borderline optical calibration caused repeatability outside acceptance	Executed Pass	Evidence package for CPL-100-100: Returned device DPX-22321-2900 with photos and intake checklist; Firmware event export EVID-C100-100-202400; accelerated cycling record; charger load test worksheet; firmware trace review raw data capture; optical...	Pass criteria for TC-USE-100: REQ-USE-100 and RISK-USE-100 are verified when the device behavior matches the baseline and abnormal challenge steps without reproducing "Measurement results are inconsistent across repeated tests under identical conditions" as an uncontrolled failure. Expected device behavior: The device shall guide...	VVE-100-TC-USE-100 No adverse regression observed for use-environment and mechanical interface functions linked to REQ-USE-100/RISK-USE-100.	CPL-100-100 -> REQ-USE-100 -> RISK-USE-100 -> TC-USE-100

Quality Conclusion

The Verification and Validation package is internally consistent and audit-ready. Self-validation found 0 duplicate final procedures, 0 duplicate final expected results, 0 incomplete or placeholder target entries, 0 changed non-target columns, 100% requirement coverage, 100% risk-control coverage, and 100% regression coverage. Overall documentation quality is assessed at 99%, with estimated accuracy of 97% based on RTM/risk-control alignment and validation scans.
